

Your Antivirus. eSentire MDR.

Atlas Agent Integration. Bring Your Own AV.

Organizations running Microsoft Defender and other antivirus (AV) solutions have been forced to choose between replacing their existing AV or accepting limited visibility and manual investigation workflows.

eSentire's Bring Your Own Antivirus (BYOAV) solution eliminates that trade-off. You can deploy the Atlas AI Agent alongside your existing AV for instant centralized alert visibility, AI-investigated findings, remote actions, and 24/7 SOC without changing your security stack, premium licensing, and portal-hopping.

MDR That Works With Your AV, Not Around It

Unified Visibility & AI-Powered Investigation

- ✓ Centralized visibility of all AV alerts and posture in the Atlas Platform
- ✓ AV alerts auto-investigated by Atlas AI with every finding explainable and every action reversible
- ✓ Multi-signal correlation - AV alerts + Atlas-native detections
- ✓ EDR bypass detection on top of existing AV coverage
- ✓ Real-time endpoint posture: scan state, signatures, exclusions

Remote Actions & Containment from One Console

- ✓ Trigger Quick Scans and update signatures directly from Atlas
- ✓ Host isolation via Atlas Agent, no AV portal required
- ✓ 24/7 monitoring and response

Continuous Security Lifecycle & Offensive Simulation

- ✓ Controlled Autonomy SecOps Flywheel – each incident hardens the environment automatically
- ✓ Find control gaps before attackers do with adversarial validation, not CVSS theory
- ✓ Behavioral detections that catch what traditional AVs miss
- ✓ Grows as your stack evolves

Why eSentire BYOAV?

Unlike platform vendors whose AI only sees their own telemetry, eSentire's Atlas Agents deploy alongside your existing AV. Atlas collects endpoint telemetry and surfaces Microsoft Defender AV alerts, posture, scans, and signature status directly in the Atlas UI giving your team a unified security interface without displacing any existing investment. AV alerts and Atlas Agent detections are automatically investigated together by Atlas AI, so your SOC sees the full picture across both signals in a single workflow.

When adversaries attempt to tamper with or disable your endpoint controls, Atlas detects it right away. The eSentire Threat Response Unit (TRU) continuously develops new detection methods as tampering techniques evolve, ensuring the SOC is alerted the moment your AV is under attack.

Why eSentire

- ✔ 2,000+ organizations protected across 80+ countries
- ✔ 2M+ endpoints under active protection globally
- ✔ Founded in 2001 with 25 years of SOC expertise embedded in Atlas
- ✔ Named MDR Leader in Forrester Wave™
- ✔ AI-investigated alerts; not just surfaced, closed
- ✔ Offensive simulation no MDR-lite offers
- ✔ Controlled Autonomy SecOps Flywheel — every incident automatically hardens the environment
- ✔ Platform architecture — works with your AV today, and your next one too

“We look at eSentire to be the experts. We trust them implicitly. They’re with us through the thick and thin till the end.”

CISO, Financial Services
GARTNER PEER INSIGHTS

“eSentire has been an indispensable partner. Their proactive monitoring and strategic advice have contributed to a significant improvement in our cyber resilience.”

Security Leader, Six-year customer

eSentire is a leader in Controlled Autonomy SecOps, protecting 2,000+ organizations across 35+ industries around the world. Founded in 2001, the company's Controlled Autonomy SecOps operating model pairs agentic AI operatives with engineered human-judgment controls, delivering expert-depth security outcomes at machine speed without ceding accountability to opaque automation. Powered by the unified agentic AI Atlas Platform, eSentire's Atlas AI + 24/7 expert human SOC coverage delivers offensive capabilities that preempt exposures before attackers do, detect, and respond to stop threats in real time.
